Bluehost review: PROS AND CONS

Pros

Cons

Bluehost is very beginner-friendly when it comes to setting up and managing your websites, perfect for non-technical users.

Bluehost automatically installs WordPress

You can manage your sites with both a user-friendly custom dashboard and also cpanel.

You can get support via a variety of channels, including over the phone (which many hosts don't offer nowadays).

Bluehost's performance can be enough for small sites, which can work well for portfolio websites or brochure websites.

If you are migrating an older website over to Bluehost it could require an additional fee to make the transfer.

No option to choose a data center manually if your trying to target a specific audience.

They do not offer any free trials

A QUICK LOOK AT KEY FEATURES

WORDPRESS SETUP/ONBOARDING TOOL:
You can create your site with a very simple setup wizard/WordPress install tool.

CUSTOM HOSTING DASHBOARD:
You can easily manage your sites via the user-friendly dashboard.

cPanel:
In addition to the custom dashboard, you can also still access cPanel for more advanced functions.

MULTIPLE WEBSITES:
You can host from one to five websites, depending on the plan (Bluehost no longer supports unlimited websites).

SSD STORAGE:
You get from ten up to 100 GB of SSD storage, depending on the plan (Bluehost no longer offers unlimited storage).

BACKUPS:
Bluehost offers an automatic backup tool called CodeGuard (but it costs extra).

SERVER-LEVEL CACHING:
This can improve your site's performance and eliminate the need to use a separate caching plugin.

FREE SSL CERTIFICATES
These help you secure your site's data at no extra cost.
